Dell PowerEdge T310

The Dell™ PowerEdge™ T310 server delivers enterprise-level performance, redundancy, and comprehensive right-sized manageability options in a 1-socket tower that is simple to own, deploy, and manage.

Dell's robust and reliable 1-socket tower server, the PowerEdge T310, offers the performance of DDR3 memory, advanced systems management options, and the availability of up to four hard drives (3.5" or 2.5") in a compact tower chassis.

Right-Sized, Flexibile Technology and Business Value

The Dell PowerEdge T310 was designed to meet the needs of your growing small business or remote office by offering more features and performance than a basic, entry-level server. Customizable with optional advanced systems management capabilities including remote management, a short 20.5 inch chassis, redundancy features, and cost-effective RAID options, the T310 is the ideal robust and reliable 1-socket tower server.

Dell aims to add value to your business by providing the features you need. Our goal is to deliver value through tailored solutions based on industry standards, as well as purposeful, innovative design.

Purposeful Design

The PowerEdge T310, part of the 11th Generation PowerEdge server portfolio, is built with system design commonality and reliability. All 11th Generation servers are built with user ease in mind. All external ports, power supplies, LEDs, and LCD screens are kept in the same location for familiar user experience and easy installation and deployment.

Robust, metal hard drive carriers and organized cabling are designed to improve component access and airflow across the server. The PowerEdge T310's purposeful design provides quiet acoustics and an optional interactive LCD screen positioned on the front by the bezel for ease of monitoring. With a chassis depth of 20.5", the PowerEdge T310's chassis is ideal for use in a back office, retail, or small office setting where space and acoustics matter.

Energy-Optimized Technology

Energy Smart technologies are at the core system level on the PowerEdge T310. These energy-optimized technologies are designed to increase energy efficiency within the server while continuing to deliver the performance your business requires. Built with lower wattage power supplies than its predecessor, the PowerEdge T310 offers highly efficient cabled or redundant power supply options. Also included in the T310 are highly efficient fans, designed to spin faster in accordance with server workload demands and help reduce unnecessary noise when possible. In addition, the logical component layout aids with airflow direction, helping to keep the server cool.

Simplified Systems Management

The Lifecycle Controller is the engine for advanced embedded management and is delivered as part of the optional iDRAC Express or iDRAC Enterprise in the PowerEdge T310. The Lifecycle Controller helps to deliver faster server deployment and update capabilities from a bare-metal, pre-operating system environment. With the Unified Server Configurator (USC) interface, the USC tool provides a single interface that enables efficient operating system deployment with built-in driver installations, firmware updates, hardware configuration, and diagnostics for the system. Servers selected with hot-pluggable hard drives will also get the benefit of an interactive LCD that can be accessed remotely using optional iDRAC Express or iDRAC Enterprise for system alerts and power usage as well as select boot-up options.

Also part of the Dell OpenManage™ portfolio is the Dell Management Console, which is included with every Dell server and provides IT administrators with a consolidated view of their IT infrastructure.

The Dell PowerEdge T310 was designed to meet the needs of your growing small business or remote office.
